LYMPHOKINES

A Forum for Immunoregulatory Cell Products

Editor
EDGAR PICK

Advisory Editor
MAURICE LANDY

"...provides an invaluable guide to the literature... each review is written by authors actively engaged in lymphokine research."

—L. E. GLYNN IN IMMUNOLOGY

This serial publication deals with a new and fast developing area in immunology and cell biology. It represents the only publication entirely devoted to recording advances in the field of lymphokines.

VOLUME 10

Growth and Differentiation of B Cells

Guest Editors

MAX SCHREIER and KENDALL A. SMITH

March 1985, 256 pp., \$49.00/ISBN: 0-12-432010-4

CONTENTS: *S.L. Swain, G.D. Wetzel, and R.W. Dutton*, B Cell Growth and Differentiation Factors. *T. Kishimoto, K. Yoshizaki, M. Okada, T. Kuritani, H. Kikutani, N. Sakaguchi, Y. Miki, H. Kishi, T. Nakagawa, K. Shimizu, K. Fukunaga, and T. Taga*, Growth and Differentiation Factors and Activation of Human B Cells. *A. Muraguchi, J.H. Kehrl, and A.S. Fauci*, Activation, Proliferation, and Differentiation of Human B Lymphocytes. *J.R. Lamb, E.D. Zanders, A. Fischer, S.H. Smith, J.T. Golay, N. Green, P.C.L. Beverley, and M. Feldmann*, Regulation of B Lymphocyte Function by Human T Lymphocyte Clones. *R.H. Zubler*, Signal Requirements for T-Dependent and T-Independent B Cell Activation. *C. Corbel, M. Leptin, and F. Melchers*, The Roles of Immunoglobulin M $\times$ H-Chain-Specific Monoclonal Antibodies, of Lipopolysaccharide, and of Dextran Sulfate or Agar Mitogen in Murine B Cell Stimulation. *T.V. Tittle*, Stages in the Induction of B Cells as Analyzed by the Response to the α (1,3) Glucosyl Epitope. *C.J. Paige*, Analysis of the Requirements for Murine B Cell Differentiation. *T. Leanderson, S. Pettersson, E. Ruuth, E. Lundgren, and A. Coutinho*, Lymphokine Participation in B Cell Responses. *L. Aarden, P. Lansdorp, and E. de Groot*, A Growth Factor for B Cell Hybridomas Produced by Human Monocytes. *C.L. Sidman, C.J. Paige, and M.H. Schreier*, B Cell Maturation Factors. *M. Cohn*, Why Lymphokines? References at the end of each chapter. Index.

VOLUME 9

1984, 400 pp., \$69.00/ISBN: 0-12-432009-0

Lymphokines, Volume 9 focuses on progress and recent developments in lymphokine biology research. Areas highlighted, such as interleukins, inflammatory mediators, interferon, growth and suppressor factors, and thymic hormones, provide a wide cross-section of the most recent research on lymphokines. Also discussed are cellular sources, mechanism of production, membrane receptors, intracellular messengers, biological relevance, and therapeutic and diagnostic applications. The relationship between lymphokines and the neuroendocrine system is studied, as well as that between lymphokines and other fields of medicine and biology. An overview of lymphotoxins, a result of years of research, is also included. Emphasis is placed on the current views of lymphokines as particular representatives of a larger category of intercellular messenger molecules. The increasing awareness of the therapeutic potential of lymphokines is explored.

IMPHOKINES

A Forum for Immunology Cell Products

Immunology Cell Products is a leading manufacturer of high quality, pure, and potent immunological reagents. Our products are used by researchers in a wide variety of fields, including immunology, microbiology, and cell biology. We are proud to offer a wide range of products to meet the needs of our customers.
